Thanks Stan

I had previously forwarded the entire package to Jon Gabry as an FYI.

I will ask him to review the Pace portion and also intend to ask him to weigh in on other comments that the Navy/Grumman and any other stakeholders submit to DEC on the report(s).

Doug,

AS discussed yesterday attached is the Pace and HDR CSIA reports. I suggest when you give this to the EPA expert for an interpretation that you only provide them with the Pace portion. This way we can consider them completely independent to form their own opinion.

Thank you,

Stan Carey, Superintendent
Massapequa Water District

Subject: CSIA Sampling Report

Attached is the draft report on the CSIA sampling that was conducted at 6 locations within the contaminated groundwater plume that exists downgradient of the former Northrop Grumman facility in Bethpage. It was received yesterday. One of the samples had no detectable TCE and levels of 1,4 dioxane in several of the samples were too low to evaluate multiple isotopes. The report concludes that the TCE results are inconclusive and the 1,4 dioxane results indicate two distinct sources. The report notes that this was intended to be the initial phase of sampling and analysis. I

suggest that future work be an agenda topic for the upcoming quarterly meeting. Please feel free to share this report with your consultants. Jim H
